

ExtremeZ-IP Offers Search Speeds Faster Than SFM and SMB

The numbers speak for themselves – ExtremeZ-IP offers unmatched file name search speeds when compared side-by-side to Windows SFM and the Mac OS X SMB/CIFS client, offering results significantly faster than SFM and SMB/CIFS when searching one million files.

ExtremeZ-IP 6.0 adds unique, optional support for full content searching on Windows servers by Mac OS X 10.5 clients using Apple’s innovative Network Spotlight feature. The tests below are for file name searching only without using Network Spotlight, since neither SFM nor the Mac OS X SMB Client allow content searching with Network Spotlight.

Time to Search Files

All tests conducted on Mac OS X 10.5.5 on an Intel 1.8 GHz, dual core iMac, 1 GB RAM and Windows 2003 Server R2 on HP Quad 2.33 GHz Xeon Server, 8GB RAM. Results based on pre-indexed ExtremeZ-IP volumes.
